Rush South Loop, Chicago, Illinois – Rush University Medical Center (RUMC) identified Chicago’s South Loop to expand its outpatient footprint. Finding 40,000 sf of contiguous space was difficult to accommodate in a patient-friendly location. During the search process, it became apparent that the best opportunity was to partner with a mixed-use developer to create a new clinic as part of a new building.
Rush South Loop, Chicago, Illinois - In addition to assisting RUMC in the leasing requirements, Eckenhoff Saunders was hired to design the new clinic. The integration within the new building includes a Michigan Avenue lobby, dedicated parking, and patient and staff entrances.
Rush South Loop, Chicago, Illinois – Programs at Rush South Loop include immediate care, complete advanced imaging suite (MRI, CT, X-ray, ultrasound, and mammography), allergy, obstetrics/gynecology, primary care, dermatology, ENT, and pediatrics. The interior design included the integration of an already strong RUMC brand.
Rush South Loop, Chicago, Illinois – The new clinic utilizes an innovative planning concept known as “off-stage/on-stage.” This concept enables caregivers to collaborate within an enclosed work environment while being near exam spaces for easy/efficient access. Each room module near the teamwork area can accommodate exam, storage, office, or consultation room capabilities.
