“It should be a home for resources, support, education and collaboration. It should be a place to connect our community of patients to each other between clinic visits.”

— Dr. Joseph Broderick
Director Gardner Neuroscience Institute
More than an architectural expression, the polyester fabric mesh façade diffuses direct light, reduces solar gain, eliminates the need for window shades, and provides the building its distinctive signature aesthetic.
“Perkins and Will listened. They listened to what our vision was, and they listened to our patients.”

— Dr. Joseph Broderick, Director Gardner Neuroscience Institute
This project was informed by research from the Perkins and Will Human Experience Lab.
