A focal point for the Union Village 155-acre development, this 250,000 sq. ft., 166-bed hospital was built in a record 15 months.

The goal of the project team was to build a high performing facility in record time for less than $800,000 per bed. To do this the team recognized that implementing an IPD Lean approach was a primary component to success.
Working with the Chief Nursing Office and staff to improve design, reduce waste and increase efficiencies and cleanliness, innovative actions included:

- Built-in narrow spectrum infection control lighting
- Smart acoustics design
- The use of silver ion-infused countertops, Cubicle curtain fabric with silver thread, antimicrobial coatings on door handles
Henderson Hospital is nationally recognized as a top performing and safe facility.
(Leap Frog A+ Rating, Hospital Acquired Infections Rating)

Universal Health Services • HMC Architects • Turner Construction Company • Southland Industries
• SR Construction • Buehler and Buehler Structural Engineers • Valley Health System
• Bergelectric • Anning Johnson Company • Excel Engineering • Amfab Steel
It’s hard to imagine what life would have been like over the past two years had we delivered this project in a conventional manner. It’s this team’s innovation, collaboration, and just plain hard work that made this project a complete success and, of course, made my work/life balance truly enjoyable.

Timothy Ott
Assistant Director, Project Management
Universal Health Services
The project team’s wow factor has nothing to do with the end product. Our wow factor is something we did during the process.
